Key Observations

Critical Priority

P2 incidents had the highest number of SLA breaches.

Team Impact

The Application team accounted for the highest breach volume.

Breach Analysis

Priority Findings

P2 had 3 breaches, representing the highest breach volume by priority.

Team Impact

The Application team accounted for 3 SLA breaches during this period.

Root Causes

Analysis shows no repeated single cause, indicating diverse operational issues.

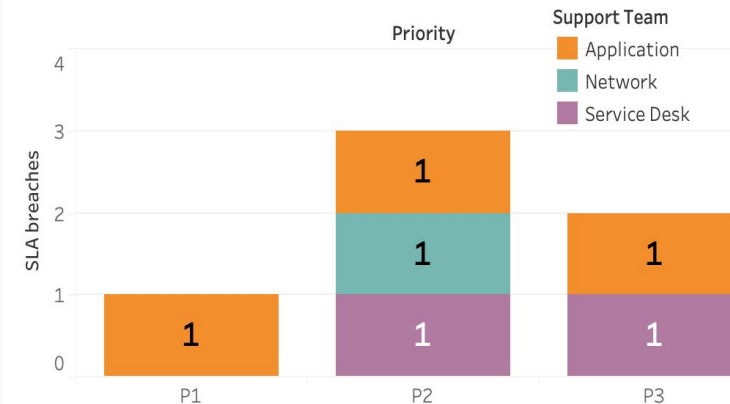

Critical Risk Areas

Key vulnerabilities identified in escalation, assignment, and dependencies.

Incidents by Support Team and SLA Status

SLA Breaches by Priority and Team

Recommended Actions

Process Optimization

Review the P2 escalation process.

Team Collaboration

Work with the Application team to reduce breach volume.

Instructional Update

Improve Application work instructions to reduce troubleshooting time.

Governance

Implement a weekly SLA review with team leads.

Vendor Management

Review vendor SLA commitments and escalation paths to reduce dependency-related delays.

Quality Assurance

Review teams with incorrect reassignments to prevent recurrence.

Action Plan

P2 escalation process

Owned by Incident Manager • **2 weeks**

Analyze Application breach drivers

Owned by Application Lead • **2 weeks**

Implement weekly SLA review

Owned by Service Delivery Manager • **Weekly**

Review incorrect reassignments

Owned by Service Desk Lead • **1 week**

Executive Summary

The analysis reviewed 10 incidents from the last reporting period. Six incidents breached SLA, resulting in a 60% breach rate. P2 incidents represented the highest breach volume, with 3 breached tickets. The Application team had the highest number of breaches. Key improvement areas include escalation, assignment accuracy, troubleshooting time, and dependency management.
